

## ABSTRACT OF THE DISCLOSURE

5 A light emitting diode (LED) warning signal light and communication  
device comprising a controller for generating a first observable light signal and a second  
non-observable light signal within said first light signal. The second light signal is  
formed of packets of individual pulsed light which may be processed for comparison to  
data stored in memory integral to a controller for communication of information to an  
individual through the use of pulsed light signals.
